SolidSound plus!

how your floor should sound.

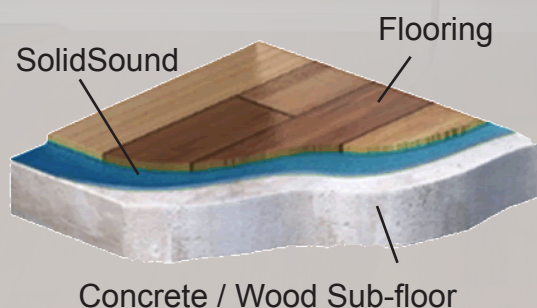

SolidSound™ is a high-performance 2mm polyolefin foam engineered specifically for the flooring industry, and contains no harmful chemicals or allergens.

SolidSound™ is also warranted for the entire life of the laminate or hardwood flooring under which it is installed, including radiant heated flooring (R3 insulation value)

SolidSound™ is an ideal choice for use in condominiums and apartments because of its superior ability to dampen sound transfer between floors.

SolidSound™ also greatly reduces the “hollow” reflected sound of laminate and hardwood flooring.

Polyolefin foam, by nature, is a moisture barrier, resistant to mold and mildew, as well as being light-weight, and easy to handle.

SolidSound™ now features a foil layer for greater tear resistance and durability.

SolidSound™ also features an adhesive flap, eliminating the need to tape seams together, making installation fast and easy!
